INVESTOR PITCH DECK

BigTR Coin

A shared digital economy layer for real products, users and future technology platforms

English Edition
September 2026

Executive investment case

BigTR begins with a live product and connects future products through one digital asset.

LIVE

Mobile application in Türkiye on iOS and Android

2.975B

Fixed maximum supply
No additional minting

40%

Pre-sale allocation
Canonical BSC USDT

1%

Project team allocation
Subject to long vesting

Economic policy

After the first Tier-1 crypto exchange listing, and subject to applicable regulations and authorized company decisions, 30% of the profit generated by BigTR applications will be used for buybacks and permanent burns, and 30% for new projects, technologies and investments. These ratios are not a guarantee of return.

The gap BigTR addresses

Project premise

Crypto participation often begins with trading activity, while daily digital services operate without a common asset layer linked to their economic activity.

BigTR measures progress through product use, ecosystem growth and verifiable economic activity, not through a guaranteed token-price outcome.

BIGTR APPROACH

01 **Start with products**

The live mobile application establishes a real user and business foundation.

02 **Create economic activity**

Each ecosystem product is intended to develop its own users and commercial model.

03 **Connect activity through BigTR Coin**

Rewards, services and future legally permitted payment use cases can share one digital layer.

BigTR ecosystem architecture

One digital layer connects products at different maturity levels.

BigTR Mobile Application	BigTR AI Assistant	Own AI Infrastructure	Country Platforms	Own Blockchain
LIVE	IN DEVELOPMENT	IN PLANNING	RESEARCH AND EXPANSION	LONG-TERM GOAL

BIGTR COIN

Shared digital economy layer

Planned social responsibility initiatives, including conservation projects, sit within the broader ecosystem and remain subject to permits and company decisions.

Product and technology roadmap

Roadmap items show current status and direction. They do not constitute delivery commitments.

1. **Mobile application**
   LIVE
   Türkiye initial market

2. **AI Assistant**
   IN DEVELOPMENT
   Business and user services

3. **Own AI infrastructure**
   IN PLANNING
   Software developed by BigTR

4. **Country platforms**
   RESEARCH AND EXPANSION
   Licensing and local partners

5. **Own blockchain**
   LONG-TERM GOAL
   Subject to feasibility

Expansion models may include country-specific licensing, franchising or strategic local partnerships, subject to local legal and financial requirements.

The live product foundation

The BigTR mobile application is live in Türkiye on iOS and Android.

It brings campaigns, offers, surveys, tasks and the reward balance together in one platform. This active product creates the first user and business layer for future BigTR Coin utility.

CURRENT USER LOOP

Business campaign

Brand or business publishes an offer or activity

User action

User joins a campaign, task or survey

Future BigTR Coin link

Reward integration where technically and legally permitted

Reward balance

The platform records the eligible reward

First market

Türkiye

Expansion will depend on country-specific operating and legal models.

BigTR Coin utility across the ecosystem

Utility expands with integrated products and only where applicable law permits.

01 **Campaign and task rewards**

Users may earn BigTR Coin through eligible campaigns, tasks and surveys.

02 **Products and services**

BigTR products may accept or use BigTR Coin after technical and legal integration.

03 **Wallet transfers**

Compatible wallets can support user access and value transfer.

Demand sources

Product activity

Purchases from crypto exchanges for operational rewards

Buybacks and burns funded with 30% of profit

Country platforms such as BigAR (Argentina) and BigFR (France) are in the research and expansion phase. Each market requires its own legal and financial assessment.

The revenue-to-ecosystem model

Each product is intended to build its own commercial model. The profit generated by BigTR applications supports the ecosystem through authorized policies.

01

Product use

Users and businesses use BigTR products and services.

02

Economic activity

Products may generate revenue through their own operations.

03

Policy allocation

30% of profit for buybacks and burns. 30% for new investments or reserve assets.

04

Ecosystem expansion

New products, technology and country platforms may expand utility.

Policy conditions

Applicable law, company performance, operational needs and decisions of authorized company bodies. The percentages are not a guarantee of return or price performance.

Token design

2,975,000,000

BIGTR fixed maximum supply

Additional minting is disabled. Permanent burns reduce the number of coins in circulation; the maximum supply cap does not change.

NAME AND SYMBOL	BigTR Coin BIGTR
NETWORK	BNB Chain
STANDARD	EVM and BEP-20 compatible
PRESALE PAYMENT	Canonical BSC USDT
SALE CHANNEL	bigtrcoin.com Web3 infrastructure

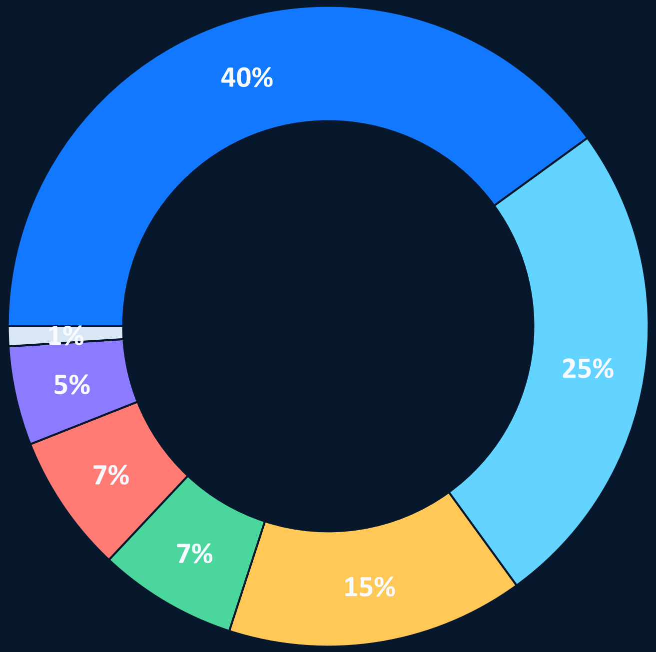
Terminology matters

Locked supply, unlocked supply and circulating supply describe different states. Public reporting must keep these amounts separate.

The official network identity, contract addresses and governance permissions must be published before launch.

Allocation of the fixed supply

Every allocation is measured against the 2,975,000,000 BIGTR maximum supply.

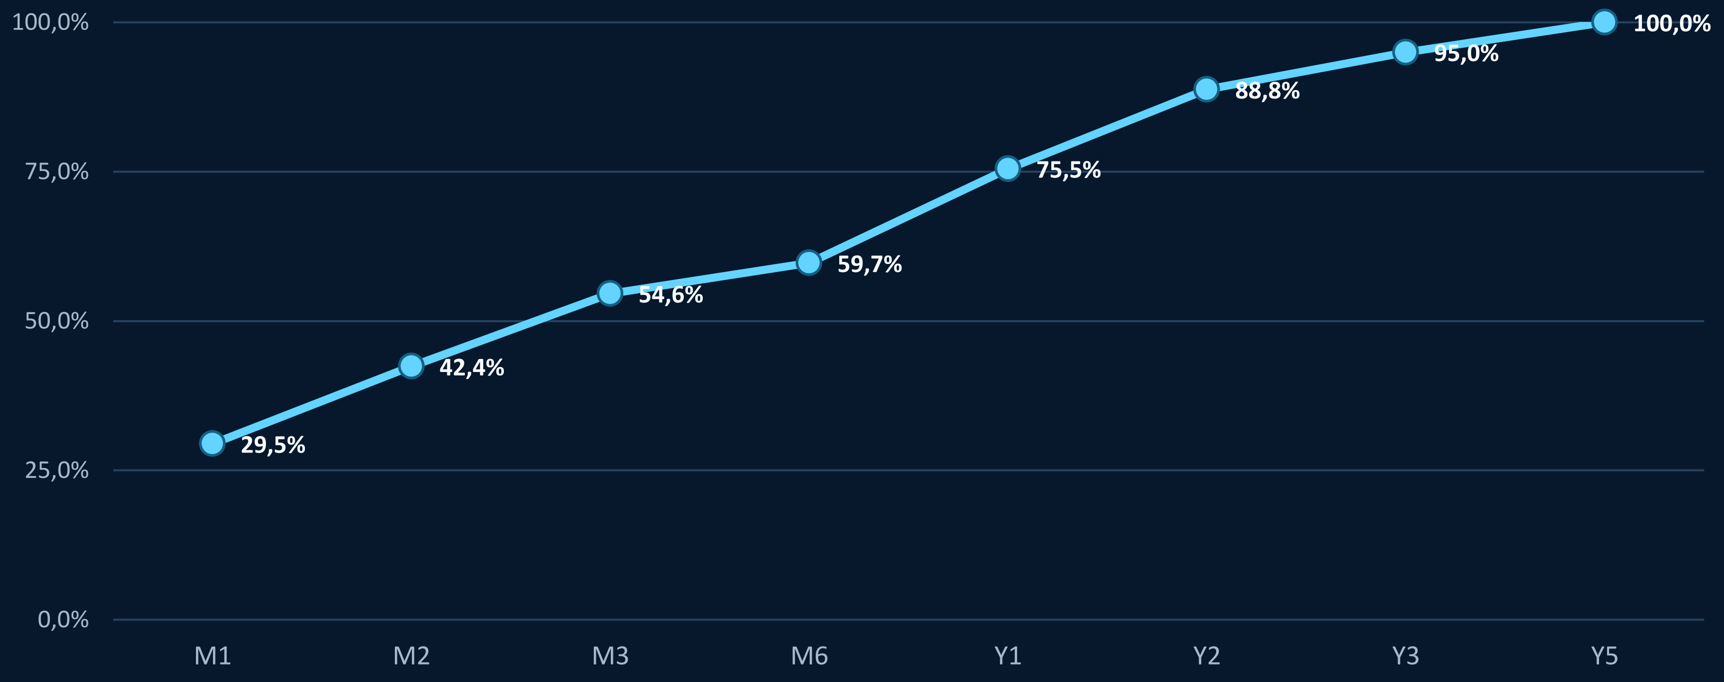


ALLOCATION	SHARE	BIGTR
Pre-sale	**40%**	1,190,000,000
Reserve Liquidity	**25%**	743,750,000
Marketing and Partnerships	**15%**	446,250,000
Community Rewards	**7%**	208,250,000
Social Responsibility	**7%**	208,250,000
Application Development	**5%**	148,750,000
Project Team	**1%**	29,750,000

100% allocated **Total 2,975,000,000 BIGTR**

Controlled release over five years

The schedule reaches 100% of maximum supply by Year 5. Unlocked supply is an upper boundary, not the same as circulating supply.



Shortest schedule

Pre-sale
3 months

Longest schedule

Reserve Liquidity
5 years

Schedule start

First Tier-1 listing date. Release method and first claim time remain pending.

BIGTR

Pre-sale and listing strategy

1.19B

BIGTR allocated to pre-sale
40% of maximum supply

7.82M

USDT target proceeds
If the full allocation sells

BSC USDT

Only canonical USDT
on BNB Chain

STAGED PRICE MODEL

The pre-sale runs in eight on-chain stages from 0.0005 to 0.048 USDT per BIGTR (40M to 400M BIGTR per stage). The stages add up to 1.19B BIGTR and exactly 7,820,000 USDT, and advance by sold quota, not by date. Per-user participation limits remain pending.

LISTING DIRECTION

The project targets a first Tier-1 crypto exchange listing, followed by at least three Tier-1 exchanges over time. Listing depends on exchange admission processes and market conditions.

Unsold pre-sale coins are added to the Reserve Liquidity Pool and follow its 5-year unlock schedule; their effect on circulation is reported separately.

Security, governance and transparency

Independent pre-sale-contract audit

Cyberscope reviewed BigTrPresale_1.sol through three iterations in 2026.

16 JUL	23 JUL	07 AUG
Initial audit	Second remediation	Final iteration

FINAL REPORT

0 Critical   0 Medium   3 Minor or Informative

All three findings were marked acknowledged. An audit reduces risk but does not guarantee security.
Cyberscope public page at the time of writing: Security Score 95%, overall assessment 81% / Low Risk.

Control framework

PLANNED	Safe multisig (2-of-3) owner and treasury wallet, verified on-chain
PLANNED	Ownable2Step ownership transfers
REQUIRED	Separate distribution and vesting audit
REPORTING	Supply, vesting, liquidity, buybacks and burns

The Transparency Center is intended to publish verifiable transaction records and preserve the distinction between unlocked and circulating supply.

BIGTR

Founder vision across four geographies

The founder vision combines operating experience from Belgium, the United States, Germany and Türkiye.

BELGIUM

Advanced software

Defense industry, aviation and critical enterprise systems

UNITED STATES

Finance perspective

Finance and capital markets experience

GERMANY

AI engineering

Artificial intelligence engineering expertise

TÜRKİYE

Real economy

Medical technology and information systems

CURRENT DISCLOSURE

The team does not publicly disclose member names at this stage and commits to KYC verification with independent audit firms.

1% team allocation subject to long-term vesting

BIGTR

Decisions required before public launch

The master model identifies 12 open implementation decisions that must be finalized before the tokenomics becomes a final public model; pre-sale stages, contract addresses and the multisig treasury are now finalized on-chain.

PENDING FINALIZATION

Sale and vesting

Per-user sale limits
Exact release day within each period
Release and claim method

PENDING FINALIZATION

Circulation and liquidity

Initial circulation
Unsold pre-sale transfer timing
Crypto exchanges, pairs and LP locks

PENDING FINALIZATION

Contracts and economics

Authority matrix and closed-minting proof
Definition of profit
Buyback process and proceeds budget

PENDING FINALIZATION

Compliance and reporting

Reserve and reward controls
Transparency Center standard
KYC, AML and legal access

Approval records should identify the decision owner, approval date, evidence and every document affected by the change.

BigTR investor overview

A live product foundation, fixed supply discipline and a roadmap that links AI, country platforms and future blockchain infrastructure through one digital asset.

2.975B
